MAGNETIC FILTER HYBRID KIT / WITH HEATER

PRODUCT DESCRIPTION ;

Cylinder Type Strainer

A strainer is a plumbing equipment that physically separates dirt, sediment and various impurities that may be present in the fluid (cold water, hot water, hot water and steam) thanks to its filter and prevents them from damaging other equipment in the installation. It is made of cast iron and has a flanged type. The drain tap on the lid can be cleaned by removing it. Strainers are used to protect equipment such as pumps; water meters and automatic check valves are installed on the suction side of this equipment, creating foreign matter.

Magnetic Filters include tube magnets, magnetic grids, magnetic drawers and other filtering devices. It is mainly used to detect weak magnetic iron contaminants (such as rust, iron filings), oxides and other small ferromagnetic impurities in liquids, slurry flows, powders, gases, etc. they are used for catching.

The Magnetic Filter is currently widely used in the power industry to improve the water vapor quality, such as hydrophobic iron removal, high temperature condensate reuse iron removal, and liquid food filling lines for the removal of fine metal impurities to ensure food safety. It is also used in the paper industry for installation after the pulper or before the pulp pump to capture harmful iron such as iron wire and nails in the pulp.

Chemical cleaning of January, heaters and boilers during their operation

This invention is related to the cleaning of sediments and the remaining fuel, and in particular to the cleaning of furnaces, heaters and boilers during their operation.

Furnaces, Heaters and Boilers of different sizes and configurations are used for energy supply at oil refineries, chemical plants and power plants. Jul. The high thermal efficiency of furnaces, heaters and boilers is critical to maximize production and minimize energy waste.

Current cleaning methods require the Decommissioning of equipment, interruption of production and the use of scaffolding. They consist of sand or water spraying or steel brushed and sandpaper.

These methods have significant disadvantages: damage to the tubes or refractory, entry into the confined space, scaffolding, shutdown of the process unit and much more. The invention is based on the on-line pneumatic spraying of dry chemicals, combining chemical and mechanical cleaning at the same time.

Cleaning the existing openings in the radiant, convection, economizer, superheater, air preheater and other parts of the equipment eliminates the need for water, indoor access, scaffolding. Cleaning is carried out Online during normal operating conditions, there is no need to turn off the process unit and damage the tubes or refractories.

Chemistry is based on a mixture of compounds in different proportions to achieve the desired cleaning results and maximize the effectiveness of cleaning.
